WORK EXPERIENCE

YourDOST

Software Development Engineer | December 2022-present

Job responsibilities:

- Specialized in front-end and mobile development and worked on enhancing platform performance using Angular, React, and Flutter.
- Enhanced user features and improved platform performance, contributing to key projects during the tenure from 2022 to 2024.

PROJECTS

1. YourDOST |

JavaScript | React | Git | Redux | Responsive Web Design | CSS3 | HTML5 | Flutter

- Revamped critical sections such as 'Home' and 'All experts' page that significantly boost user interaction.
- Designed and implemented multiple assessment modules for web and mobile enhancing feature depth and usability.
- Developed an internal platform with real-time Firebase integration for counselors to boost counselor efficiency.
- Designed and implemented a few assessment modules for the web platform with Angular, and the mobile app with Flutter.
- Embedded Amplitude events in user journeys to improve analytics tracking and data-driven decision-making.

2. CLONE OF PEPPERFRY | |

JavaScript | HTML5 | CSS3

- Collaborated with a team to develop a comprehensive web application for purchasing furniture and home decor.
- Implemented user authentication and category-based gallery to enhance user experience and navigation.
- Developed and optimized key frontend components, including the footer, cart, and card pages, using HTML5 and CSS3.
- Managed and organized backend database operations to ensure efficient data handling and retrieval.
- Ensured seamless functionality and integration of ecommerce features, such as the ability to order furniture online.
